

College & University Immunization Compliance

CALIFORNIA

As stated in California Health & Safety Code Chapter 1.7 sections 120395-120399, public and private post secondary institutions with on-campus housing must provide educational material about meningococcal disease with space for a signature and indication if the recipient has chosen to receive the vaccination. The college or university is required to collect and maintain these completed forms from students who will be residing on campus.

California college and university staff are faced with the challenge of manually collecting and processing student vaccine paper records prior to the start of each semester. With a Student Medical Record (SMR) software like Magnus Health, schools save time, decrease overhead costs, and ensure immunization state law compliance for their school.

Save time and release student holds faster

- Universities and colleges eliminate paperwork and manual form processing by collecting required forms in one online portal.
- Students receive frequent email reminders regarding their missing bacterial meningitis immunization records.
- Magnus nurse reviewers process student immunization records within 1-2 business days.
- Automate the student hold release process via integration with your Student Information System.
- Simple reporting feature allows you to run immunization reports for internal or Public Audits.
- If your university or college has additional required immunizations, Magnus can process those as well.

Students submit immunization records online

- Students can upload their bacterial meningitis immunization record right from their mobile device.
- Transferring students can download a copy of the immunization record to submit to their next school.
